World Water Week 2018 to focus on Water, Ecosystems & Human Development

Veolia is proud to promote **World Water Week** to raise awareness of the need for sustainable water, energy, and resource management on a global basis.

Resourcing the world is Veolia's mission - to develop access to resources, preserve available resources and replenish them. Managing the world's resources sustainably, equitably and efficiently for the common good of all people while protecting the earth's natural ecosystems will ensure the quality of life for future generations.

Learn How Veolia Works to Protect our Seas and Oceans

Veolia's Role in Water Management

> 96 million people supplied with drinking water

> 62 million inhabitants connected to wastewater systems

> 4,117 water production plants managed

> 2,878 wastewater plants managed

> 353 million m3 of water reused from collected and treated wastewater

Learn The Essentials

Our Three Main Activities Preserve Water, Waste and Energy Resources

Veolia treats and monitors **water quality** at all stages of the cycle, from extraction to discharge into the natural environment. We innovate to preserve the resource and promote water recycling and reuse for cities and industry.

We specialize in **waste management**, regardless of whether it is liquid or solid, non-hazardous or special. Our expertise covers the entire waste life cycle, from collection to recycling and final recovery in the form of materials or energy.

An expert in **energy services**, Veolia supports the economic growth of its municipal and industrial customers while reducing their ecological footprint. Energy efficiency, efficient management of heating and cooling networks, production of green energy - unique expertise for a more sustainable world.

Veolia is working to achieve a **circular economy** in which waste is seen as a valuable resource, wastewater is a new water source, and wasted energy is a new source of heat. Whatever your vocation, we invite you to join us in **resourcing the world.**
